

CANADA'S #1 FIBERGLASS TANK MANUFACTURER.

FIBERGLASS HOME HEATING OIL TANKS THAT SIMPLY WILL NEVER RUST!

YOUR ASSURANCE OF QUALITY...

ZCL Composites Inc. is the most trusted name in the petroleum industry for environmentally safe storage of petroleum products. Our tanks are the benchmark for today's higher standard of environmental protection.

Quality Design

- Corrosion resistant design gives you more than twice the tank life when compared to other tanks. It's your safest and most economical bet over the long haul and likely the last tank you'll ever have to buy!
- Manufactured in Canada using 100% quality, UV and fire resistant fiberglass/resins.
- Liquid tight construction with 100% leak free joints.
- Stable fiberglass saddle stands.
- Weather proof design – can be installed inside or outside and does not require any containment walls.
- Factory installed sight-glass for easy visual monitoring on Double Wall Tanks only
- Convenient side or top feed options.

Quality Assured

- Every tank is factory performance tested, no "rubber stamp inspections"
- Every tank conforms to Underwriters Laboratories of Canada (ULC) specifications for Aboveground Non-Metallic Tanks for Fuel Oil—ULC C80.1-2000

Tanks are ULC listed for diesel storage for standby generators.

25 Year Warranty

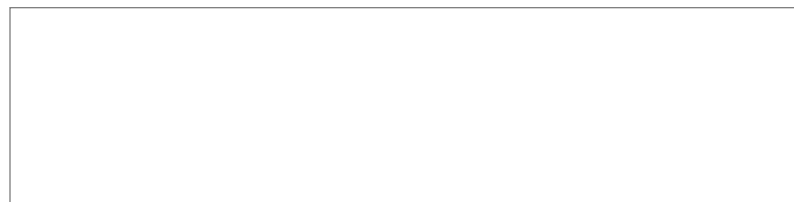

- Tanks come with a 25 year limited warranty against leaks caused by corrosion.
- The double wall system has an enhanced warranty that provides up to \$1.0 million on-site clean-up coverage for 10 years from date of purchase. Please refer to warranty certificate for details.

For more information, contact your local home energy centre, fuel oil distributor or installer.

25 Year Warranty

THE FIBERGLASS TANK THAT SIMPLY WILL NEVER RUST!

NEVER WORRY ABOUT COSTLY TANK LEAKS AGAIN

Guaranteed long-term, trouble-free service...

Leaks can be costly. A rusting fuel storage tank could end up costing you anywhere from \$20,000 to \$200,000 in environmental cleanup costs! The problem... condensation, humid air, sludge and salt are constantly eating away at older steel tanks, often causing dangerous rust leaks. Internal rust damage is hard to detect, and not usually visible

until it's too late. The solution... **The Safer Tank™ from ZCL, it simply will never rust.** It doesn't require containment walls and is weather-proof to allow either indoor or outdoor installation. Plus it comes with a 25 year warranty that guarantees you long-term, trouble-free service!

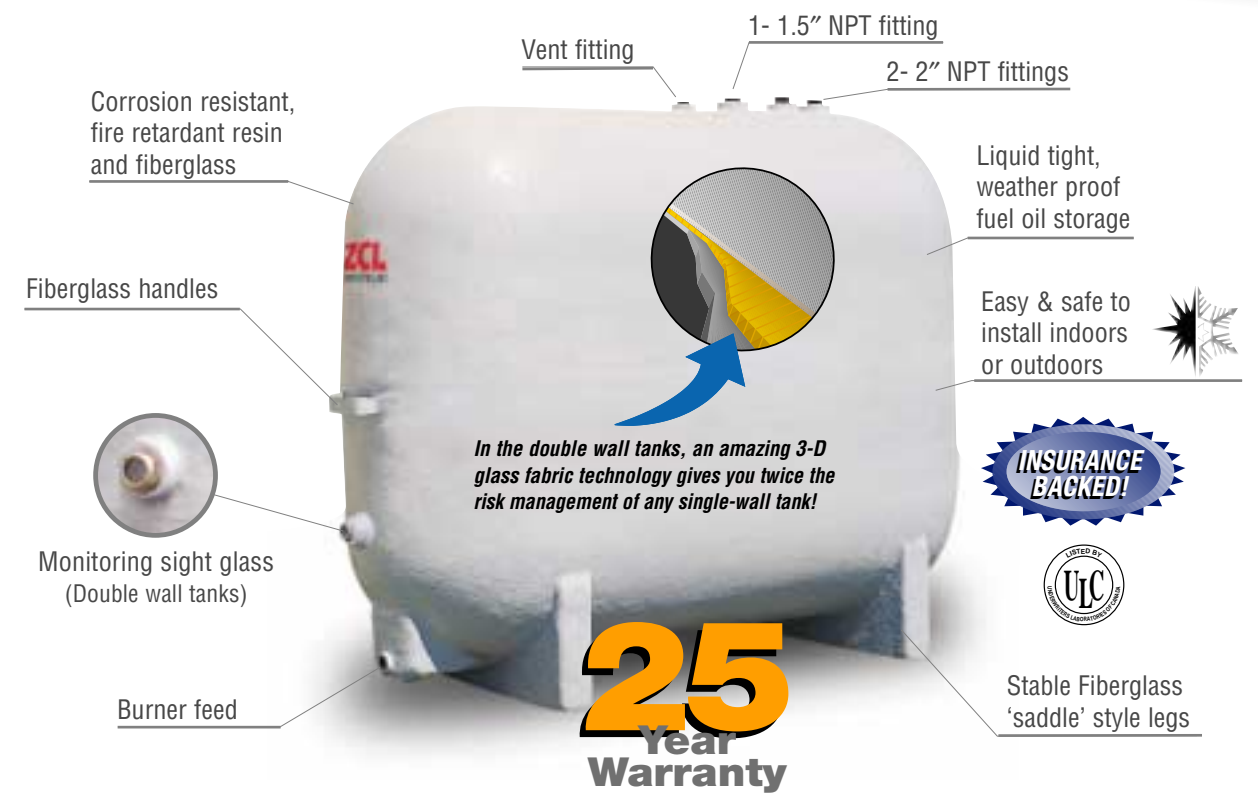

Choose from single or double wall protection...

Tanks are available in double or single wall designs and can be installed alone or in groups with common filling and venting pipes for supplying a central heating system.

In the double wall tanks, two walls of protection allow for maximum security in the unlikely event of a leak in the primary wall. A visual sight-glass lets you inspect the integrity of your double wall storage tank at any time.

SPECIFICATIONS

<ul style="list-style-type: none"> • Holding capacities of 200 or 250 Gal in both double or single wall designs • 2x2" NPT fittings and 1x1.5" NPT fitting • Convenient side or top burner feed • Fiberglass saddles (legs) for better stability • Fiberglass handles for easy and safe handling • Visual sight-glass monitoring (double wall tanks) 	Standard models	L	W	H	Weight
	200G s/w	65"	24"	53"	175lbs
	200G d/w	65"	24"	53"	195lbs
	250G s/w	79.75"	24"	53"	190lbs
	250G d/w	79.75"	24"	53"	215lbs

THE ONLY TANK THAT GUARANTEES LONG TERM PEACE OF MIND!

Now the worry of a leak caused by unseen corrosion associated with older model tanks is virtually eliminated. Our double wall tank system has unprecedented reliability and is backed by an

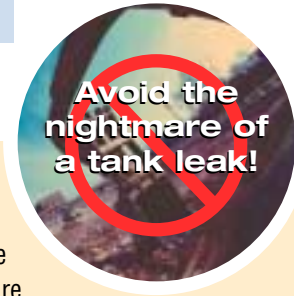

'Enhanced Warranty' that provides up to \$1.0 million on-site clean-up coverage for 10 years from date of purchase! (Please refer to warranty certificate for details.)

THE FACTS OF TANK LIFE...

Rust facts...

Nearly all fuel oil tanks rust from the inside out. Because of condensation, water and sludge accumulates at the bottom of the tank. This in turn can cause internal rust, which is generally not visible. Leaking tanks are also a result of improper tank maintenance, damp locations and

damage. Outdoor installations are more susceptible to condensation as a result of day-night temperature changes. Outside rust is noticeable by the small pinholes on the exterior of the tank. **A ZCL tank on the other hand, is made from 100% fiberglass and simply will never rust, inside or out!**

Causes of Spills...

Oil spills from domestic oil tank systems at private homes account for nearly 40% of annual spills reported to local and Provincial governments. Leaking storage tanks account for a high percentage of all heating oil spills.
